SUMMARY

Self-taught Python developer focused on backend development on Linux. I built, deployed and maintain a live Python and FastAPI service on Amazon Web Services (AWS EC2), using PostgreSQL, Docker and Continuous Integration (GitHub Actions), reachable through a Telegram bot and a web app. No employment history yet, so the projects below are the evidence. Looking for a remote Python developer internship or entry-level backend developer role.

SKILLS

Languages: Python, C, SQL

Backend: FastAPI, REST APIs, PostgreSQL, Telegram Bot API, WhatsApp Cloud API (test tier)

DevOps and Cloud: Docker, Docker Compose, AWS EC2, Linux server, systemd, GitHub Actions (CI)

Core: Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), debugging

Tools: Git, GitHub, Linux command line, Visual Studio Code

Also used: GTK4, libadwaita, data analysis

Backend and DevOps tools above were each used in one shipped project and are still being learned.

PROJECTS

Yojana Sathi (live) — Python, FastAPI, PostgreSQL, Docker, AWS EC2 sathi.avinashnegi.com ·

github.com/avinashnegi1999/yojana-sathi

- Welfare-scheme screening service for India's unorganised workers in Hindi and English; live on Telegram and the web, with WhatsApp Cloud API running on Meta's test tier.
- Eligibility is decided by deterministic rules with a cited source on every value; a language model handles language only and never decides eligibility.
- Screens against 21 welfare schemes, each reviewed and signed off by hand; any value not yet verified returns UNKNOWN instead of a guess.
- Deployed and maintained by me on AWS EC2 (ap-south-1) as a systemd service that runs 24/7 and survives reboot, with a passing GitHub Actions CI pipeline.

tufglow — Python, GTK4, libadwaita, Linux sysfs github.com/avinashnegi1999/tufglow

- Linux desktop app (GTK4) that controls colour, brightness, effects and hotkeys for ASUS TUF keyboard backlighting.
- Drives the kernel's asus-nb-wmi sysfs interface directly, with no asusctl dependency, replacing a Windows-only vendor utility.
- Debugged and fixed two whole-system freezes in an early version, and published a post-mortem of the cause and the fix.

NIMCET Past-Paper Analysis — Python, data analysis github.com/avinashnegi1999/nimcet

- Labelled and re-verified 2,248 questions across 19 years of past papers (2008–2026) and built a heat-map dashboard of topic weightage.
- Surfaced shifts the official syllabus does not state, such as a topic disappearing from the paper and another section roughly doubling in one year.

100 Days of Python — Python github.com/avinashnegi1999/100-Days-of-Python-Pro-Bootcamp

- A 100-day public log of Python projects and problem-solving; a practice record rather than a product.

EDUCATION

Bachelor's Degree, Software Engineering specialisation — Amity University Online — *Expected May 2027*

TRAINING

- 100 Days of Code: The Complete Python Pro Bootcamp (Udemy)
- Data Structures and Algorithms in Python, 44-day course (Udemy): linked lists to graphs and dynamic programming
- Linux Command Line (Udemy)

WRITING

- [I built a keyboard RGB app for my laptop, and it froze the whole machine twice](https://medium.com/@avinashnegi1999/i-built-a-keyboard-rgb-app-for-my-laptop-and-it-froze-the-whole-machine-twice) — tufglow debugging post-mortem (Medium)
- [DSA with Python](https://hashnode.com/@avinashnegi1999/dsa-with-python) — ongoing series, linked lists to dynamic programming (Hashnode)
- [Linux for Beginners](https://hashnode.com/@avinashnegi1999/linux-for-beginners) — ongoing series on the command line from zero (Hashnode)
